

# BENEFITS OF HEIGHT ADJUSTABLE POWER SOLUTIONS

Height adjustable tables (HAT), or sit-to-stand desks, allow users to adjust their workspaces throughout the day in an ergonomic way that best fits their needs. HATs are becoming increasingly popular in office environments. However, these kinds of work surfaces require specific power solutions because height adjustable power products offer unique benefits, including:

## Single Power Source

Power solutions designed specifically for height adjustable tables allow for the work surface, various devices, and desktop accessories to all be powered from a singular source.

## Flexible Office Space Design

Designers are able to disconnect from layouts that require the implementation of cubicles, paneling, and power poles that were traditionally used to power work stations and instead, offer height adjustable desking that is dynamic and versatile. When powered properly, HATs can also be DaisyChained to create an even more flexible office space design.

## Improve Cord Management

When work surfaces are powered by height adjustable power products, the mess of tangled cords is a thing of the past. Cord management is streamlined in order to provide a safe, smooth, height adjustable working experience.
