

WHAT IS DAISY CHAINING?

In electrical terms, a daisy chain is a wiring scheme in which multiple devices are wired or plugged together in sequence. Dekko offers products that are specific for this application: Daisylink (Two Circuit) and Perimeter (Single Circuit). These two products are used congruently with our other products within our family of brands that are daisy chain capable. This type of setup is ideal for training tables, conference tables, open workspace, and so much more. Daisy chain systems are customizable and highly configurable to fit the needs of your space.
